

IN THE SPECIFICATION:

Amend the specification as follows:

[0076] When the ceramic green sheet 20 is picked up, a processor unit ~~(not shown)~~ P
(shown schematically in FIG. 1) stores beforehand data concerning the types of, the
lamination order of, and the number of ceramic green sheets 20 required to produce a
laminate of a desired electronic monolithic ceramic component, and the processor thereby
causes the tray 8 holding a required ceramic green sheet 20 to be drawn, and the first
chucking device 14 to pick up the ceramic green sheets 20 one by one.
